Kirami Legroom led coronas

WEIGHT:	1.2 kg

6430036756710

As nights grow dark, the lights are lit and the mood brightens. The LED lights are available for Kirami’s translucent tubs that create magical spa moments. The LED lighting system, available as an accessory, illuminates the bottom part of the hot tub with the lights shining through the translucent interior material. The solution is safe, as the LEDs are embedded between the insulation and the liner of the hot tub, ensuring that none of the system’s components come into contact with water. The light shines through the translucent interior material, with no need to make any holes in the tub. LED lights are made in Finland. The LED lights are factory fitted which means that they need to be ordered with a hot tub.

LED lights for the translucent interiors of Kirami’s L size hot tubs.
